Town of Hay River EMO Update

April 26, 2021 Breakup Report

Cooler temperatures have slowed down the melt and subsequent breakup in northern Alberta and southern NWT. Warm weather in the previous week initiated the melt and breakup in northern Alberta and it looks like ice broke at both Sousa Creek and the Chinchauga river. Levels in those two areas have now stabilized. We are forecasted to have cooler weather over then next couple of days which is going to slow down the breakup.

EMO personnel are continuously monitoring the situation and will advise of any changes as they occur.
